## what is remote neural monitoring?

I know basically what it is but how does it work exactly, and in what way are they using it?

### Posted Answers

By prokopton - Posted on July 17th, 2010

**A:** What is being done about the fact that there are thousands of innocent American citizens by tormented by this technology in the United States.

Along with it goes electronic harassment which is more like torture and gang stalking, smearing and intimidation tactics of which I believe is a result of Homeland Security hiring the Stasi Communist Marcus Wolf. The first thing the authorities do is tell you to go see a psychologist but the problem with that is there are literally thousands of Americans who are having the same exact delusions. If you doubt that - google gang stalking and take some time and read the many many forums, websites, blogs, books and many get the electronic torture and remote neural monitoring like.

Many people have posted the photos of the damage to their bodies online. I looked at a list of 450 Americans who have reported this and I did not see one Muslim name. A ref book is "A New Breed" by Dr. John Hall - Satellite Terrorism in America and a reference website is Freedom from Covert Harassment. I believe this technology may not only be in government hands-- NSA, CIA and Homeland Security but I believe simply from recorded experiences-- wealthy MD's have it in Dr. Hall's case in San Antonio, TX and in Rancho Bernardo, CA somebody has it but I don't know who.... The stuff is freaky.... they click your head a lot-- that is V2K or microwave hearing and they can talk to you bypassing your ears... They can electronically harass you as well. I have contacts of many other targeted individuals and this is being reported all over the USA

**A:** Have you ever seen the movie "Minority Report" starring Tom Cruise?

Robert C. Gunn, PhD, Arbor, Michigan, is a an NSA clinical psychologist involved in the human and Constitutional rights violations of Mind Control. He has committed unthinkable atrocities, worldwide

Gunn is involved in covert psychological warfare against innocent Americans and other global citizens. He is among the developers of Psychotronic attacks, which is a highly advanced, surreal form of mind control that is intended to induce suicide among its thousands of targets.

The mind control technology is known as Remote Neural Monitoring.

The technology employs Satellite-delivered (ELF) Extra Low Frequencies to communicate voice-to-skull transmissions. This produces schizophrenic symptoms.

ELF radio signals are used to communicate with Naval Submarines deep below the oceans' surfaces. These frequencies can pinpoint a target anywhere on Earth and can penetrate water, rock, concrete and other dense matter.

Consider this, the brain is composed of neurons (wires) and is powered by low electrical currents. Much like insects communicate with non-contact antenna, humans can communicate with radio transceivers.

Just like each of us has a unique genetic code (DNA) each of has our own distinct radio frequencies. Find the frequencies and a terror technician can communicate directly to the brain.

Gunn is part of the development team that created a protocol of torturing victims. For decades, Gunn worked as a clinical psychologist at the Ann Arbor Veterans Affairs Hospital. There, Gunn deprogrammed World War II, Korean War and Vietnam War prisoners of war.

Gunn learned the secrets of mind control torture techniques by deprogramming these POWs. Then,

in the 1980's, Gunn was recruited to work on the Strategic Defense Initiative, commonly known as the Star Wars program.

He had already been involved in land-based mind control experiments involving mobile microwave triangulation transmissions.

Gunn and a staff of technicians would isolate a victim and beam radio signals into the victim's home.

Now, unbelievably, these attacks are delivered via satellite.

In addition to mind control torture, Gunn and others developed a methodology to produce remote-delivered body shocks to the groin and elsewhere.

The third component of this torture involves holographic projections and audible acoustic projections.

Finally, the fourth component of this electronic harassment involves "gang stalking." This involves actual incidents of community operatives stalking and spying on neighbors.

Sometimes, the gang stalkers are paid operatives that are equipped with electronic eavesdropping devices, infrared detectors, ex-ray viewers and directed energy weapons that fire-off high-energy microwave pulses.

Gunn is involved with a covert unit of the National Security Agency. The unit operates like Nazi Gestapo agents without regard for human or constitutional rights.

The first reports of these attacks surfaced throughout Michigan and Canadian border communities.

Michigan is the only state in the nation to enact legislation outlawing this type of electronic harassment, which lends credibility to the fact that these covert operatives exist.

The Ada, Michigan-based Amway Foundation is among the many right wing organizations that help fund this quasi-governmental domestic torture group.

The founders of Amway are the largest contributors to the Bush Family's so-called New World Order, which is high-tech offspring of the Michigan Militia.

Amway is notorious for gang stalking people who seek to escape the Pyramid Scheme subculture.

The targets of these attacks are often estranged domestic partners, Jews, Blacks, women, disabled people, whistleblowers, people seeking criminal and civil justice and local "degenerates" who are addicted to drugs or alcohol.

Gunn and his wife Leah, the Co-Chair of the Washtenaw County Commission, are involved in local homeless shelter projects. Gunn has conducted psychological interviews of numerous homeless people and then used the information in his subject experiments.

Robert Gunn is an undetected human rights violator.

"Google" the following combined terms, "Remote Neural Monitoring + NSA + Law Suit." Also research Gang Stalking, MKUltra, Mind Control.

Thank you for your interest and concern.

#### Remote Neural Monitoring

Remote Neural Monitoring is a form of functional neuroimaging, claimed[1] to have been developed by the National Security Agency(NSA), that is capable of extracting EEG data from the human brain at a distance with no contacts or electrodes required. It is further claimed that the NSA has the capability to decode this data to extract subvocalizations, visual and auditory data. In effect it allows access to a person's thoughts[2] without their knowledge or permission. It has been alleged that various organizations have been using Remote Neural Monitoring on US and other citizens for surveillance and harassment purposes.[3]. Functional neuroimaging is the use of neuroimaging technology to measure an aspect of brain function, often with a view to understanding the relationship between activity in certain brain areas and specific mental functions. ... "NSA" redirects here. ... EEG can mean: Electroencephalography - the method and science of recording and interpreting traces of brain electrical activity as recorded from the skull surface or the device used to record such traces Emperor Entertainment Group - A Hong Kong entertainment company. ... The human brain In animals, the brain (enkephale) (Greek for in the skull), is the control center of the central nervous system, responsible for behavior. ...

#### History

Remote Neural Monitoring has its roots in the infamous MKULTRA project of the 1950s which, although it focused on drugs for mind control, also included neurological research into "radiation" (non-ionizing EMF) and bioelectric research and development. The earliest non-classified references to this type of technology appear in a 1976 patent by R.G. Malech Patent #3951134 "Apparatus and method for remotely monitoring and altering brain waves" USPTO granted 4/20/76.

The patent describes a technique using the transmission of 100 and 210 MHz signals to the brain yielding a 110 MHz signal which is modulated by the brain waves and can be detected by a receiver for further processing. Wikipedia does not yet have an article with this exact name. ...

In the early 1980s it is claimed that the NSA began extensive use of Remote Neural Monitoring. Much of what is known about it stems from evidence presented as part of a 1992 court case brought by former NSA employee John St.Claire Akwei against the NSA. It describes an extensive array of advanced technology and resources dedicated to remotely monitoring hundreds of thousands of people in the US and abroad. Capabilities include access to an individual's subvocalizations as well as images from the visual cortex and sounds from the auditory cortex.

Peaceful applications

While use of this technology by organizations like the NSA is difficult to validate, recent advances in non-classified areas are already demonstrating what is possible:

- \* Subvocal recognition using attached electrodes has already been achieved by NASA[4].
- \* BCIs for gaming consoles from companies like NeuroSky perform primitive "thought reading" in that they can be controlled with a helmet on the player's head, where the player can execute a few commands just by thinking about them.
- \* Ambient has demonstrated a motorized wheelchair that is controlled by thought[5].

A brain-computer interface (BCI), sometimes called a direct neural interface or a brain-machine interface, is a direct communication pathway between a human or animal brain (or brain cell culture) and an external device. ...

## DOMESTIC SURVEILLANCE & MIND CONTROL TECHNOLOGY

### Domestic Surveillance and Mind Control Technology?

The following are the first six pages of evidence in a lawsuit filed by a citizen against the National Security Agency (NSA) in 1992 alleging harassment and seeking relief for same. This lawsuit was filed in the U.S. Courthouse in Washington, D.C.

Evidence for the Lawsuit filed at the U.S. courthouse in Washington, D.C.

(Civil Action xx-xxxx)

Xxx Xxx vs NSA, Ft. George G. Meade, Maryland.

My knowledge of the National Security Agency's structure, national security activities, proprietary technologies and covert operations to monitor individual citizens.

The NSA's mission and the NSA's domestic intelligence operation

Communications Intelligence (COMINT) Blanket coverage of all electronic communications in the U.S. and the world to ensure national security. The NSA at Ft. Meade, Maryland has had the most advanced computers in the world since the early 1960's. NSA technology is developed and implemented in part from private corporations, academia, and the general public.

#### Signals Intelligence (SIGINT)

The Signals Intelligence mission of the NSA has evolved into a program of decoding EMF waves in the environment for wirelessly tapping into computers and tracking persons with the electrical currents in their bodies. Signals intelligence is based on the fact that everything in the environment with an electric current in it has a magnetic field around it which gives off EMF waves. The NSA/DOD has developed proprietary advanced digital equipment which can remotely analyze all object whether (tran-maze?) or organic that have electrical activity.

#### Domestic Intelligence (DOMINT)

The NSA has records on all U.S. citizens. The NSA gathers information on U.S. citizens who might be of interest to any of the over 50,000 NSA agents (HUMINT). These agents are authorized by executive order to spy on anyone. The NSA has a permanent National Security Anti-Terrorist surveillance network in place. This surveillance network is completely disguised and hidden from the public.

Tracking individuals in the U.S. is easy and can effectively implemented with the NSA's electronic surveillance network. This network (DOMINT) covers the entire U.S. and involves thousands of NSA personnel, and tracks millions of persons simultaneously. Cost-effective implementation of operations is achieved by NSA computer technology designed to minimize operations costs.

NSA personnel serve in quasi-public positions in their communities and run cover business and legitimate businesses that can inform the intelligence community of persons they would want to track. NSA personnel in the community usually have cover identities such as social workers, lawyers, and business owners.

Individual citizens occasionally targeted for surveillance by independently operating NSA personnel

NSA personnel can control the lives of hundreds of thousands of individuals in the U.S. by using the NSA's domestic intelligence network and cover businesses. The operations independently run by them can sometimes go beyond the bounds of law. Long-term control and sabotage of tens of thousands of unwilling citizens by NSA operatives is likely to happen. NSA DOMINT has the ability

to covertly assassinate U.S. citizens or run covert psychological control operations to cause subjects to be diagnosed with ill mental health.

#### NSA's domestic electronic surveillance network

As of the early 1960's the most advanced computers in the world were at the NSA, Ft. Meade. Research breakthroughs with these computers were kept for the NSA. At the present time the NSA has advanced technology computers that are 15 years ahead of present computer technology.

The NSA obtains blanket coverage of information in the U.S. by using advanced computers that use artificial intelligence to screen all communications, regardless of medium, for key words that should be brought to the attention of NSA agents/cryptologists. These computers monitor all communications at the transmitting and receiving ends. This blanket coverage of the U.S. is a result of the NSA's Signals Intelligence (SIGINT) mission.

The NSA's electronic surveillance network is based on a cellular arrangement of devices that can monitor the entire EMF spectrum. This equipment was developed, implemented and kept secret in the same manner as other electronic warfare programs.

#### Signals Intelligence Remote Computer Tampering

The NSA keeps track of all PCs and other computers sold in the U.S. This is an integral part of the Domestic intelligence network.

The NSA's EMF equipment can tune in RF emissions from personal computer circuit boards (while filtering out emissions from monitors and power supplies). The RF emission from PC circuit boards contains digital information on the PC. Coded RF waves from the NSA's equipment can resonate PC circuits and change data in the PCs. Thus, the NSA can gain wireless modem-(?) entry into any computer in the country for surveillance or anti-terrorist electronic warfare.

#### Detecting EMF Fields in Humans for Surveillance

A subject's bioelectric field can be remotely detected, so subjects can be monitored anywhere they are. With special EMF equipment NSA cryptologists can remotely read evoked potentials (from EEGs). These can be decoded into a person's brain-states and thoughts. The subject is then perfectly monitored from a distance.

NSA personnel can dial up any individual in the country on the Signals

Intelligence EMF scanning network and the NSA's computers will then pinpoint and track that person 24 hours-a-day. The NSA can pick out and track anyone in the U.S.

#### NSA Signals Intelligence Use of EMF Brain Stimulation

NSA Signals Intelligence uses EMF Brain Stimulation for Remote Neural Monitoring (RNM) and Electronic Brain Link (EBL). EMB Brain Stimulation has been in development since the MK Ultra program of the early 1950's which included neurological research into "radiation (non-ionizing EMF) and bioelectric research and development. The resulting secret technology is categorized at the National Security Archives as "Radiation intelligence" defined as "information from unintentionally emanated electromagnetic waves in environment, not including radioactivity or nuclear detonation."

"Signals Intelligence implemented and kept this technology secret in the same manner as other electronic warfare programs of the U.S. government. The NSA monitors available information about this technology and withholds scientific research from the public. There are also international intelligence agreements to keep this technology secret.

The NSA has proprietary electronic equipment that analyzes electrical activity in humans from a distance. NSA computer-generated brain mapping can continuously monitor all of the electrical activity in the brain continuously.

The NSA records and decodes individual brain maps (of hundreds of thousands of persons) for national security purposes. EMF Brain Stimulation is also secretly used by the military for bring-to-computer links. (In military fighter aircraft, for example.)

For electronic surveillance purposes electrical activity in the speech center of the brain can be translated into the subject's verbal thoughts. RNM can send encoded signals to the brain's auditory cortex thus allowing audio communications direct to the brain (bypassing the ears).

NSA operatives can use this to covertly debilitate subjects by simulating auditory hallucinations characteristic of paranoid schizophrenia.

Without any contact with the subject, Remote Neural Monitoring can map out electrical activity from the visual cortex of a subject's brain and show images from the subject's brain on a video monitor. NSA operatives see what the surveillance subject's eyes are seeing. Visual memory can also be seen. RNM can send images direct to the visual cortex, bypassing the eyes and optic nerves. NSA operatives can use this to surreptitiously put images in a surveillance subject's brain while they are in R.E.M. sleep for brain-programming purposes.

## Capabilities of NSA operatives using RNM

There has been a Signals Intelligence network in the U.S. since the 1940's. The NSA, Ft. Meade has in place a vast two-way wireless RNM system which is used to track subjects and non-invasively monitor audiovisual information in their brain. This is all done with no physical contact with the subject. RNM is the ultimate method of surveillance and domestic intelligence.

### Speech and 3D

sound, and subliminal audio can be sent to the auditory cortex of the subject's brain (bypassing the ears) and images can be sent into the visual cortex. RNM can alter a subject's perceptions, moods and motor control.

Speech cortex/auditory cortex link has become the ultimate communications system for the intelligence community. RNM allows for a complete audiovisual brain-to-computer link.

### NSA Signals Intelligence Electronic Brain Link Technology

NSA SIGINT can remotely detect, identify and monitor a person's bioelectric fields.

The NSA's Signals Intelligence has the proprietary ability to remotely and non-invasively monitor information in the human brain by digitally decoding the evoked potentials in the 30-50 Hz 5 milliwatt electro-magnetic emissions from the brain.

Neuronal activity in the brain creates a shifting electrical pattern that has a shifting magnetic flux. This magnetic flux puts out a constant 30-50 Hz 5 milliwatt electromagnetic (EMF) wave. Contained in the electromagnetic emission from the brain are patterns called "evoked potentials."

Every thought, reaction, motor command, auditory event, and visual image in the brain has a corresponding "evoked potential" or net of "evoked potentials". The EMF emission from the brain can be decoded into the current thoughts, images and sounds in the subject's brain.

NSA SIGINT uses EMF-transmitted Brain Stimulators as a communications system to transmit information (as well as nervous system messages) to intelligence agents and also to transmit to the brains of covert operations subjects for a non-perceptible level).

EMF Brain stimulation works by sending a completely coded and pulsed electromagnetic signal to trigger evoked potentials (events) in the brain, thereby forming sound and visual images in the brains' neural circuits. EMF Brain Stimulation can also change a person's brain-states and affect motor control.

Two-way electronic Brain-Link is done by remotely monitoring neural audiovisual information while transmitting sound to the auditory cortex (bypassing the ears) and transmitting faint images to the visual cortex (bypassing the optic nerves and eyes). The images appear as floating 2-D screens in the brain.

Two-way electronic Brain Link has become the ultimate communications system for CIA/NSA personnel. Remote neural monitoring (RNM, remotely monitoring bioelectric information in the human brain) has become the ultimate surveillance system. It is used by a limited number of agents in the U.S. Intelligence Community.

RNM requires decoding the resonance frequency of each specific brain area. That frequency is then modulated in order to impose information in that specific brain area. The frequency to which the various brain areas respond varies from 3 Hz. to 50 Hz. Only NSA Signals Intelligence modulates signals in this frequency band.

#### An example of EMF Brain Stimulation

##### Brain Area

Motor Control Cortex

Auditory Cortex

Visual Cortex

Somatosensory Cortex

Thought Center

##### Bioelectric Resonance Frequency

10 Hz

15 Hz

25 Hz

9 Hz

20 Hz

## Information Induced Through Modulation

Motor impulse coordination

Sound which bypasses the ears

Images in the brain bypassing the eyes

Phantom touch sense

Imposed Subconscious Thoughts

This modulated information can be put into the brain at varying intensities from subliminal to perceptible.

Each person's brain has a unique set of bioelectric resonance/entrainment frequencies. Sending audio information to a person's brain at the frequency of another person's auditory cortex would result in that audio information not being perceived.

The Plaintiff learned of RNM by being in two-way RNM contact with the Kinnecome group at the NSA, Ft. Meade. They used RNM 3D sound direct to the brain to harass the Plaintiff from 10/90 to 5/91. As of 5/91 they have had two-way RNM communications with the Plaintiff and have used RNM to attempt to incapacitate the Plaintiff and hinder the Plaintiff from going to the authorities about their activities against the Plaintiff in the last twelve years.

The Kinnecome group has about 100 persons working 24 hours-a-day at Ft. Meade. They have also brain-tapped persons the Plaintiff is in contact with to keep the Plaintiff isolated. This is the first time ever that a private citizen has been harassed with RNM and has been able to bring a lawsuit against NSA personnel misusing this intelligence operation method.

## NSA techniques and Resources

Remote monitoring/tracking of individuals in any location, inside any building, continuously, anywhere in the country.

A system for inexpensive implementation of these operations allows for thousands of persons in every community to be spied on covertly by the NSA.

## Remote RNM Devices

NSA's RNM equipment remotely reads the evoked potentials (EEGs) of the human brain for tracking individuals and can send mental images through the nervous system to affect their performance.

Now I know you aren't going to read all of them, they are doing it and it's much more complicated than that, and think what this means to those with whom you have come to love, to your family and to yourself.
